## PROFESSIONAL SUMMARY

Software Engineer with a frontend focus and strong experience building and evolving modern web applications with React, TypeScript, and Next.js. Experienced in frontend architecture, legacy system modernization, API integration, and engineering practices, with hands-on backend experience using NestJS, Express, Prisma, PostgreSQL, and MongoDB.

At MTN Irancell, contributed to the architectural modernization of a large-scale Digital POS platform used across a telecom ecosystem serving 40M+ subscribers, improving application performance, error handling, and user workflows to help users complete tasks faster. Strong collaborator who works closely with engineering teams and stakeholders to turn business requirements into practical technical solutions.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Java (prior experience)

**Frontend:** React.js, Next.js, React Router, Redux Toolkit, Zustand, TanStack Query (React Query), Vite, i18n / internationalisation, Tailwind CSS, Mantine UI, Ant Design, Responsive UI design

**Backend:** NestJS, Express.js, Prisma, TypeORM, PostgreSQL, MongoDB, SQLite, Camunda (BPM / workflow automation)

**Architecture & Engineering:** Application Architecture, Component Design, API Design & Integration, State Management, Legacy Codebase Migration, Performance Optimization, Scalable Frontend Systems

**Mobile:** React Native, Android SDK, Java, XML, WatermelonDB

**Infrastructure / Tools:** Git, Docker, Git, Docker, CI/CD, ESLint, Husky, Lint-Staged, Commitlint, Code Review, Engineering Standards

## WORK EXPERIENCE

**Frontend Engineer** - MTN Irancell Feb 2024 - Present

*React - TypeScript - Vite - Digital POS platform - 40M+ subscribers - Tehran, Iran - Hybrid*

- Played a key role in the architectural modernization of a large-scale Digital POS platform, contributing to the migration of a legacy MeteorJS / React class-based codebase toward a modern React, TypeScript, and Vite architecture.
- Worked closely with frontend engineers, backend teams, and business stakeholders on architectural and technical decisions across routing, state management, API integration, project structure, and development workflows, translating business requirements into practical technical solutions.
- Established and introduced engineering standards and development workflows including ESLint, Husky, Commitlint, Lint-Staged, and Git conventions, improving code consistency and making quality checks and review processes more reliable.
- Improved frontend performance and user workflows through architectural and implementation improvements, resulting in faster POS operations, more robust error handling, and a more reliable user experience.
- Contributed to a staged migration approach that enabled the legacy system to evolve incrementally while maintaining system stability and uninterrupted business operations.

**Frontend Developer** - *Boomaid Jul 2023 - Feb 2024*

*Next.js - React - TypeScript - Zustand - TanStack Query - Tailwind CSS - US-based platform - Remote*

- Contributed to migrating the platform from a WordPress-based implementation to a modern Next.js and React architecture, improving flexibility, maintainability, and frontend performance.
- Improved SEO and page performance through Next.js Server-Side Rendering (SSR), optimized rendering, and more efficient data-fetching strategies.
- Built reusable and responsive UI components using Tailwind CSS and Ant Design, establishing consistent patterns across the application.
- Managed client and server state using Zustand and TanStack Query, improving data synchronization and reducing unnecessary client-side requests.
- Contributed to TypeScript adoption and modernization of the frontend codebase, improving type safety and long-term maintainability.

**Frontend Developer** - *Hantana Mar 2021 - Jul 2023*

*React - Next.js - Redux Toolkit - analytics platform - Tabriz, Iran - On-site*

- Contributed to building a Hotjar-comparable analytics and session-recording platform over a 2+ year tenure, developing core frontend features and maintaining the product through multiple release cycles using React and Next.js.
- Led migration of legacy HTML-based frontend components to React and Next.js, modernising the codebase architecture and improving developer experience and long-term scalability of the frontend system.
- Built and maintained reusable UI component library with focus on maintainable architecture and consistent design patterns, improving feature development velocity across the team.
- Implemented Redux Toolkit for application-wide state management, restructuring project patterns to eliminate state inconsistencies and support scalable feature development.

**Android Developer** - *Dadeh Gostar Mehrafroz Jan 2018 - Mar 2021*

*Java - XML - SQLite - Android SDK - Tabriz, Iran - On-site*

- Contributed to the 'Tabriz 2018' cultural event Android application — a city-wide platform providing navigation, regional maps, and event information — developing application features using Java, XML, SQLite, and third-party APIs engagement.
- Built Android UI screens and application logic in close collaboration with the engineering team, covering UI implementation, data persistence, and API integration across the full application feature set.

**Android Developer (Freelance)** - *Independent Sep 2017 - Jan 2018*

*Tabriz, Iran*

- Built small Android applications independently, gaining foundational expertise in asynchronous requests, REST API integration, and local data storage — establishing the engineering fundamentals applied across subsequent roles.

**EDUCATION**

---

**Associate's Degree** - Technical and Vocational University, Tabriz *Mar 2019*
